Abstract (en)

[origin: US4772160A] An apparatus for machining the edge of a lens. A fixed housing having a lid and a bulge is provided. Two half shafts mounted in the housing, with a lens being adapted to be held between these half shafts. A rotatable edge-machining tool in the form of a milling tool is disposed in the housing. A motor is provided for driving the milling tool, with this tool and the motor being movable relative to the housing in two horizontal coordinate directions, whereby the milling tool is adapted to be moved between a rest position in the bulge and an operating position that is in the housing but out of the bulge.
