Abstract (en)
[origin: GB2225260A] An additive composition for use in recovering coal fines in a froth flotation process comprises a hydrophobic polyvinylether, a frother and a liquid organic carrier. The polyvinylether may be for example polyvinylethylether or polyvinylisobutylether, the frother may be for example methyl isobutyl carbinol or a mixture of polypropylene glycol ethers, and the organic carrier may be for example gas oil, diesel oil, kerosene or another petroleum- or coal-based distillate. Preferred ranges and examples are described.
