Abstract (en)

1. Pack for a liquid product, in the form of a plurality of containers (1) joined together in a common packing (7, 8), said containers having a substantially square or rectangular cross-section and having their neck (2) formed in one of the angles of their upper surface, said containers being joined together in their common packing in two rows with their necks turned upwards, said common packing having at least one hooping member placed around the containers, characterized in that the said containers have a reinforcement (5) in their lower surface vertically of said neck and able to receive the neck of a container of another pack, that their necks are located in external lateral planes of said rows and that said common pack comprises a handle (9) passing between the necks of one of the rows of containers and the necks of the other row.
