Abstract (en)

The limit stop device for the opening of sun curtains exploits the tendency of cross frontal bar (5) urged by arms (6,7) to unroll the curtain from roller (2) on which it is wound. The device consists of a ratchet mechanism (10) comprising a cylinder (12) provided with teeth (14) and inside which turns a pin (20) having spring teeth (30). The rotation of pin (20) in one direction, disengages teeth (30) from the teeth (14) of cylinder (12), thereby allowing the curtain to unroll in steps only up to the maximum possible opening while in the opposite direction it allows rewinding of the curtain on roller (2)
