Abstract (en)
[origin: EP0246372A1] A prefabricated and modular chimney facade (10) is provided for enclosing a chimney stack (12) on the exterior of a building (14). The chimney facade includes a first one-piece module (18) e.g. of moulded plastics material, which is fastened to a foundation (20) and to the external wall (16) of the building (14). The base module (18) is vertically aligned with and coupled to a transition module (44) which is fixed to the external wall (16) of the building structure (14) above the base module. Additional modules (74, 102, 120) may be coupled to the transition housing (44) to provide a complete enclosure for smoke stack (12). The housings (18, 44) as well as additional housing units (74, 102) and cap housing (120) are all formed as integral one-piece plastics mouldings, to give a lightweight, inexpensive facade.
