Abstract (en)

The invention relates to a device making it possible to tow a vehicle by means of a locking system, composed of a linking element (16) for the attachment member (1), a lever clamp (41, 42) to be connected to the vehicle to be towed, to be fixed beneath the saddle or beneath the load to be transported, it being possible for the attachment system to consist of two levers (41, 42), the ends of which have the shape of a pair of tongs or another shape [lacuna], into which fits a bolt (36) or a knob (39) of a tube or ring (32) fixed beneath the rod (21), a spring (46) keeping the levers (41, 42) open when the user exerts, by means of the lever (14), a force counter to that of the spring (46). The levers (41, 42) in the shape of a pair of tongs close around the bolt (36), knob (39) or the like fixed beneath the rod (21). The device according to the invention is intended, in particular, for towing a cycle or wheeled object. <IMAGE>
