Abstract (en)

The present invention relates to an automatic machine for the processing of corrugated paper so as to obtain containers. Said machine is composed of a first station (2) for the multiple feeding of corrugated cardboard (6a, 6b, 6c), even of different widths. Successively, a second station is provided for inserting the corrugated cardboard (6a, 6b, 6c) of the preset width, followed by a third station adapted for allowing the transverse cutting thereof. A fourth and fifth station respectively allow to achieve the scoring and dinking of said corrugated cardboard (6a, 6b, 6c) which is then removed from the machine. Said machine is provided with control and data input means (104-109) which allow the programming, the command and the control of the operating phases of the machine.
