Abstract (en)
[origin: EP0247478A2] 1. A photographic recording material developable by heat treatment comprising at least one binder layer which is applied to a layer support and which contains photosensitive silver halide, but essentially no other inorganic silver salts, at least one non-diffusing dye-producing compound, which is capable of releasing a diffusible dye in consequence of development by heat treatment, and a fog-reducing compound, characterized in that the fog-reducing compound corresponds to the following formula I see diagramm : EP0247478,P23,F2 in which Q represents the radical required to complete a heterocyclic group containing at least one 5- or 6- membered heterocyclic ring and, optionally, rings fused thereto ; X represents a carboxylic acid or sulfonic acid group or a radical containing a carboxylic acid or sulfonic acid group, it also being possible for the carboxylic acid or sulfonic acid group to be present in anionic form.
