Abstract (en)

The invention relates to a strong load-handling band, such as a multi-lift band (12), double-lift band (25) and a load-strapping band (26), its supporting part being a core made up of numerous reinforcing plastic films (11) of the same width as the band. The films (11) are laminated one on top of the other, in which case they remain parallel during the handling of the load. The bands can also be encircled with a plastic protective mantle (16) of one or several layers.
