Abstract (en)
[origin: US4799448A] In a portable traffic marker, the footplate has on its upper side a recess of rectangular or square outline in which the post is inserted. On the post either a portable traffic marker plate is fixed or a portable traffic marker body is fitted. The post has an M profile, the two mutually parallel side segments of which have the same length as each other, which is at least approximately the same as the inside diameter of the recess in the footplate. The two middle segments of the M profile are likewise of the same length and extend from the point of connection with the respective neighboring side segment at least approximately up to the middle of the line joining the free ends of the two side segments of the M profile.
