Abstract (en)
A wig including an artificial scalp portion and artificial hair secured thereto. The scalp portion and hair are both composed of fiber filaments formed of a fine powder of a single type or composite type of inorganic or organic substance with excellent heat releasing characteristics and of synthetic fibers, natural fibers natural hair or regenerated fibers. The fine powder is mixed in the fibers, or those fibers are coated with the powder, using a synthetic resin adhesive for obtaining the fiber filaments. The inorganic powder may be a metallic powder including copper, titanium oxide, aluminum, iron zirconium or ceramic as the primary component, and organic powder may be a powder having synthetic resins or natural fibers as the primary components. The wigs thus provided are easy to handle and care for as they are able to release heat efficiently even at high temperatures or under poorly aerated conditions utilizing the thermal conductivity of the component material of the artificial scalp portion and the artificial hair of the wig.
