Abstract (en)

[origin: US4784342A] A device for spooling multiple threads includes a plurality of spools situated on a spool mandrel having pins with spreading thread guides which are displaceable on the end of the spool mandrel parallel thereto to the spreading position which corresponds to the position of the tuck slots of individual pins. A pivotable spreading flap is provided in the device, which has guide slots for exact positioning of the threads relative to the tuck slots of individual pins.
