Abstract (en)
[origin: US4841689A] Presented is a two-shell telescopic element for a movable partition that has a wall section and a horizontally extendable telescoping part. The cover panels of the telescoping part are disposed on the telescoping part in transversally movable fashion to their principal plane. With extended telescoping part, the cover panels run out from the overlapping area formed with the cover panels of the wall section and can be brought into an end position aligning with the cover panels of the wall section, transversally to the running planes, by an actuating mechanism.
