Abstract (en)
[origin: EP0249077A1] 1. Contrivance to carry out dwell treatments within wet-treatment processes where the fabric webs are guided through the dwell treatment through an enclosure with floor elements forming a through between conveying devices located below and above the fabric webs, deposited in crimps on the conveying devices below and above the fabric webs, characterized by the fact that the floor elements (12) of the enclosure (11) and the conveying devices (13, 16) located within the enclosure are formed or positioned respectively to give a V-shape in the direction of passage of the fabric web (10), with the conveying device below the fabric web (13) being a screen belt (14) in the first side of the V-shaped guide system, and a roller passage (15) in the second side of the V-shaped guide system, and the conveying device (16) above the fabric web being a screen belt, of which the lower part facing the fabric web is guided correspondingly in a V-shape.
