Abstract (en)
[origin: EP0249100A2] The edge (16) of the mounting cup (4) is connected to the frame edge of the container frame (2) by beading. The mounting cup (4) is composed of an inside partial mounting cup (13) and an outside partial mounting cup (14) and it has at least one opening (11, 12) to receive closures (10). In order to attach the closure, an edge (17), projecting from the plane of the mounting cup, is moulded onto the openings (11, 12). Compared to the known curved mounting cup, more space is achieved for the arrangement of several closures and the mounting cup (4) can be used, due to the double wall 13, 14, even at high propellant gas pressures. <IMAGE>
