Abstract (en)

[origin: EP0249244A2] In order to be able to demonstrate tools in the shop, it is often necessary to be able to check the grip or other functions of the tool but without providing the possibility of removing the tool from its fastening device. In order to provide a displaying and operating tool which is secure against theft, an essentially Y-shaped attachment arrangement is proposed which consists of two parts formed by interacting arresting knobs and arresting hoods. <IMAGE>
