Abstract (en)  
Liquid mixing apparatus for continuously mixing and delivering a concentrate with a diluent comprises a first reservoir (1, 21) for a first liquid, at least one further reservoir (11, 31) for another liquid which is to be mixed with the first liquid and continuous dosing means (5, 6, 7, 8, 9, 10; 25, 26, 27, 28, 29, 29', 30, 35, 39) comprising a delivery duct (5, 6, 7, 8; 25, 26, 27, 28) through which the first liquid may be discharged from the first reservoir and at least one branch duct (9, 10; 29, 29', 30, 35, 39) leading from the or each further reservoir and joining the delivery duct at a point intermediate its ends enabling in use the entrainment of the other liquid(s) by the first liquid and mixing thereof within the delivery duct whenever the first liquid is caused to flow from the first reservoir through the dosing means which may be a syphon or venturi system. The apparatus is useful for preparing and delivering sheep dip, insecticides, or other liquid mixtures requiring careful control of concentration and regulated delivery.
