Abstract (en)
1. A fin assembly for a kinetic energy projectile of the AP-FS-DS type, including an elongated penetrator made of a heavy material, characterized in that it is made of a material consisting of a plastic compound which includes 0% to 60% by weight of strengthening material and/or charge, and in that the so-constituted material has a melting temperature greater than 520 degrees K and a thermal conductivity coefficient smaller than 0.25 W (m x degree K).
