Abstract (en)

[origin: EP0249531A1] Method for controlling a central-heating system of a building, applicable to a system comprising a generator for heating a heat- transfer fluid, characterised in that a model defining the average interior temperature of the building based on compared changes of the heating control and of a temperature of the heat-transfer fluid is used and, where appropriate, further developed by machine learning and in that the said generator is controlled by means of a regulator (10), depending on the performance of the said model. <IMAGE>
