Abstract (en)  
[origin: EP0249684A2] As Fig. 1 illustrates, the invention relates to a lined moccasin, in which, to increase the durability, the outsole 2 is joined by means of a perforated groove 1, running around the bottom at the edge, to the upper leather 3 and lining 4 and a cushion 10 in between. The lining 4 leaves a clearance at the edge, into which a supporting fabric 5 is laid, and into which a plastic adhesive 6 is injected, also filling the groove 1 and perforation 7. <IMAGE>
