Abstract (en)

[origin: EP0249693A2] 1. A support (1) for railway freight wagons, in particular flat wagons, arranged in the region of the headstock (3) and designed as a two-part support leg comprising an upper support leg mounting (1a) fixed to the wagon and a lower support leg (1b) which can be brought into the position of use or rest relative thereto and locked therein, and which in the position of use is maintained at a distance from the upper edge of the rail, characterised in that at the lower end of the support leg mounting (1a), the lower support leg (1b) can be swivelled in parallel to the headstock (3) of the railway freight wagon and in the rest position relative to the position of use is arranged in the same plane outwardly offset in the direction of the longitudinal side of the railway freight wagon, that in the position of use the support leg (1b) is arranged in an extension of the central axis of the support leg mounting (1a) where the end faces of the support leg mounting (1a) and of the support leg (1b) abut against one another, and that one single arrangement (5) effects and secures the locking and unlocking of the swivelling support leg (1b) both in the position of use (Fig. 1) and in the rest position (Fig. 3).
