Abstract (en)  
[origin: EP0249945A2] The door hinge has a first hinge part (1) for attachment to a door wing, a second hinge part (2) for attachment to a door frame and an axle bolt (6) forming the axis of rotation. The axle bolt (6) is provided with a threaded part (7), with which it is screwed into a threaded nut (10) in a recess (9) in the hinge part (1) in a height-adjustable manner. Approximately in the centre, the axle bolt (6) has engagement means (13) for an adjustment tool, for example a spanner. Seated on the threaded part (7) is a check nut (14) which rests on the hinge part (1), into which the threaded part (7) is screwed.
