Abstract (en)

A process for the pre-treatment of natural and regenerated cellulosic fibres and blends thereof with synthetic fibres for the purpose of subsequent transfer printing comprises applying to said fibres a composition comprising a mixture of hexamethoxymethyl melamine and a C4-8 glycol in the presence of water, and drying said fibres at a temperature below 180 DEG C. The above compositions per se, with or without water and polyvinyl chloride or polyvinylidene chloride polymer or copolymer emulsions or dispersions, are also claimed.
