Abstract (en)

[origin: EP0250329A1] 1. A propellant charge (7) consisting of powder, for example in the form of a granular powder, intended for the propulsion of projectiles, namely large-caliber kinetic energy sub-caliber projectiles of the AP-FS-DS type (2) and placed inside a cartridge case of revolution (5), either metallic or not, including at one end a base and, at the other end, the projectile, said propellant charge being characterized in that it comprises holding means ensuring its compactness and its symmetry as to the axis of revolution of the cartridge case.
