Abstract (en)
[origin: EP0251017A1] 1. Device for the achievement of a low wastage of weft thread in the case of a web with leno edge at the border and made on shuttle-less looms, characterised thereby, that the weft thread end rests on a support element which is arranged beside the leno edge and that a clamping thread is provided, which is guided transversely to the weft thread end and clampingly retains the weft thread end, and that a lifting equipment for the clamping thread in agreement with the weft thread movement is provided at a spacing from the support element.
