Abstract (en)
[origin: EP0252163A1] The steam bath cabin consists of at least three cabin walls and one cabin roof, at least the cabin walls being formed by individual elements (3) which are placed upon one another and have a heat insulation material (6) in particular foamed plastic, and openings being provided for the steam intake and for the drawing off of air and also for a door. The elements consist of metal profiled troughs (4, 5), whose inside is filled with the heat insulation foam (6) in such a way that the heat insulation foam (6) projects beyond the longitudinal edges (8) of the longitudinal walls (5) of the profiled troughs by a distance (7). <IMAGE>
