Abstract (en)
The doffer unit of a carding apparatus includes a doffer 1 forming an appropriate setting with a fluted stripper roll 2 from which the carded web 5 is stripped means of a blade 13 and laid on the upper surface of a stationary support plate 4 which guides the carded web to a condensing belt arrangement 6. Traditionally a driven roller has been considered necessary to support the web 5 on its way to the condensing belt system 6, and surprisingly the present invention is able to operate satisfactorily and reliably with a stationary support plate.
