Abstract (en)

In carrying out the invention, there may be provided a powder pick-up system for thermal spray guns comprising an enclosed hopper for a powder to be thermally sprayed in loose particulate form, a feed gas conduit adapted to discharge a regulated amount of feed gas under pressure into the hopper, a unitary carrier conduit structure powder pickup device having a single carrier gas inlet and a plenum connected to said inlet with a plurality of separate carrier gas bores connected to receive gas from said plenum, separate outlet connections from each of said bores for separate delivery of gas-trained powder to at least one spray gun, said conduit structure including at least one opening through a wall thereof from each of said bores into the interior of said hopper for picking up powder therefrom.
