Abstract (en)

[origin: EP0253312A2] Cabin construction for an assembly line, in particular a painting facility, wherein fixedly mounted vertical supporting elements (46) are connected to platelike building elements (12) to form a continuous cabin wall. According to the invention each of the platelike building elements (12) is designed as an exchangeable building unit which extends from the cabin ceiling to the cabin floor and has a closed, rectangular profiled frame (24, 26) which defines at least one panel (30) in which a platelike infilling element (32) can be fixed by means of holding devices (34, 35, 36) so as to be detachable from inside and/or outside the cabin. <IMAGE>
