Abstract (en)
There is disclosed an elongate channel section (15) intended for use as a component of a support structure which is intended to support a region or regions of a building or to support cladding, the channel section (15) comprising a planar base (16), two spaced-apart side walls (17) extending generally perpendicularly with regard to the plane of the base (17), and two short returns (18), each extending inwardly from the free end of a respective side wall (17), the base (16) being provided along its length with a series of regularly spaced pairs of apertures (20, 21) and each side wall (17) being provided along its length with a series of similarly regularly spaced apertures (23). The section (15), in combination with other components, may be used to construct a support structure for supporting a region or regions of a building, such as a facade of a building.
