Abstract (en)

[origin: EP0254155A2] The cardboard blank has a longitudinal seam and four end wall flaps, of which the one in the region of the longitudinal seam is of double construction. One of the end wall flaps lying one above the other each case is linked in each case to a side wall, thus forming the longitudinal seam likewise lying one above the other. The adjacent end wall flaps are not completely separated from one another, with the result that a closure membrane can be sealed on without interruption. <IMAGE>
