Abstract (en)
Disclosed is a method of recording images on a recording medium (3), comprising the steps of: heating a recording member (1) having ink (2) for effecting recording of an image on the recording medium (3) and a porous material allowing the ink to permeate therethrough in response to an image signal; conveying the recording medium to the recording member after heating; and transferring the ink onto the recording medium via the porous material. Also disclosed is an apparatus for recording images on a recording medium, comprising: a recording member (1) having ink (2) for effecting recording of an image on the recording medium (3); a heater (5) for heating the recording member in response to an image signal; and a conveyor for conveying the recording medium in such a manner as to bring the recording medium into contact with the recording member which has been heated by the heater.
