Abstract (en)
[origin: US4754618A] A method of treating textile materials and an equipment for carrying out this method are provided, notably for dyeing miscellaneous textile materials or articles, whether woven, knitted or unwoven, of synthetic, artificial or natural origin and of various configurations. The method comprises a sequence of steps consisting in disposing the textile material to be treated on a support matching the configuration of the textile material and having at least one inner cavity in its peripheral area as well as a pervious surface contiguous to the textile material; hot-impregnating the textile material to be treated by using a dyeing solution forced through the material from the back side to the right side thereof at a predetermined temperature, and rinsing the textile material by means of a rinsing liquid forced through the material from the back side to the right side thereof during a predetermined time and at a predetermined temperature.
