Abstract (en)
[origin: EP0255580A2] The light sources (lighting points) are switched by switches, which in turn are operated from control points. The system has at least one telecontrol device, which, by means of signals irradiable from a control point, can emit different control signals, each associated to a different lighting point, and has, near each lighting point, an associated telecontrolled switch, which is operated when it receives a prefixed combination of the aforesaid irradiated signals.
