Abstract (en)
The ski boot with a flexibility adjustment device comprises a shell (2) whereto is connected at least one quarter (3) which can be inclined or moved with respect to the shell (2). The device comprises a first stroke limiting element (5) to limit the forward movement of the quarter (3) and a second stroke limiting element (15) to limit the backward movement of the quarter (3). An adjustment member (12) can be operated externally by the user to vary the position of the first stroke limiting element (5) and thus vary the excursion of the quarter (3).
