Abstract (en)

[origin: EP0255692A2] The hinge arm has a U-shaped profile and can be used in baseplate guides. Optionally, it can be mounted on a baseplate having a threaded hole for a fixing screw by means of said screw. Preferably, however, it can be locked by means of an intermediate plate to a baseplate having a stop and a cushioned hook-type latch projection which snaps in behind a holding edge of the hinge arm or possibly the intermediate plate. In order to be able either to mount the hinge arm on a standard baseplate with a fixing screw without additional modifications or to lock it to a baseplate with a snap-in fastening device, the holding edge is formed by an already existing edge of the hinge arm or the intermediate plate.
