Abstract (en)

[origin: EP0255892A2] Coloured images to be viewed in reflection, having a slight and stable yellow fog, can be produced by chromogenic development, using a recording material which contains, on a light-reflecting base, at least three silver halide emulsion layers, arranged thereon, of different spectral sensitivity and associated colour couplers, a special 2-equivalent yellow coupler (formula II) and a special white coupler (formula III) being associated with the blue-sensitive silver halide emulsion layer, and the binder layers having been hardened by an instant hardener (formula I).
