Abstract (en)
[origin: EP0255934A2] In a tachograph for motor vehicles, it is provided that the carrier of a record chart receptacle is firmly connected to a bridge arranged at a distance above it and forming a separating member and can be at least partially moved out of the tachograph housing, that a first record chart is arranged on the side of the bridge facing away from the carrier and a second record chart is arranged between carrier and bridge, the bridge forming the writing base for the first record chart and the carrier forming the writing base for the second record chart, and that at least one stylus writing on the second record chart is arranged in the intermediate space formed by the bridge between the record charts. <IMAGE>
