Abstract (en)

[origin: EP0255947A2] The device makes it possible to produce a free jet having a large throwing distance and high energy concentration with a low liquid consumption. It contains a pump unit (4) for increasing the pressure of the carrier liquid and a jet tube (8) with nozzle (9) which are connected by a store (6) for the liquid, and it is fitted with a non-return charging valve (5) and a pulsating discharge valve (7) to produce an operating cycle consisting of a charging period and a shorter discharge period. <IMAGE>
