Abstract (en)
[origin: US4790115A] A folding turret (10) for receiving packs (11) or other articles in pockets (17) consists of part turrets (25, 26) which are adjustable relative to one another during a stationary phase of the turret, in such a way that the cross-section of the pockets (17) is temporarily increased and then reduced again. During the rotary movement of the folding turret, the pockets (17) have a reduced cross-section which ensures that the packs (11) are fixed within the pockets (17) as a result of a clamping effect.
