Abstract (en)
[origin: EP0256439A2] An attachment for at least one lamp, especially for a lamp with a cap on one side, has a casing with a power supply terminal for accommodating operational circuit elements for the lamp, which casing is separated along a parting plane into two casing parts which can be mutually counterrotated, of which at least one casing part has at least one lamp terminal. Arranged in the parting plane between the casing parts is an adaptor which forms a part of the casing wall and via which the two casing parts are connected to one another in a pivoting fashion, preferably detachably. <IMAGE>
