Abstract (en)  
[origin: EP0256672A1] A method of producing a label for attachment to a container, the method comprising the steps of:- (a) providing a longitudinal sheet having a row of a plurality of pairs of panels, each pair being separated from an adjacent pair by a respective transverse fold line and there being a longitudinal fold line separating the panels of each pair, one end pair of panels constituting front and back cover panels respectively for the sheet and the front cover panel having a transversely extending flap; (b) applying a strip of glue along the longitudinal fold line on one side of the sheet; (c) folding the sheet about the or each transverse fold line so that the panels of the sheet other than the front and back cover panels are superposed over the front and back cover panels, the plurality of pairs of panels being adhered together by the glue strip; (d) folding the sheet about the longitudinal fold line so that the front and back cover panels enclose the remaining panels, the flap of the front cover panel extending transversely beyond the remaining panels and the back cover panel thereby to have a rearwardly exposed surface, and (e) separating the sheet along the transverse fold lines thereby to form a booklet. i
