Abstract (en)

[origin: WO8704907A1] The bracelet comprises a first strap (4), a second strap (5), one end of each strap being integral with a watch case (1), and a band (7) adjoined to the other end of the second strap. The first strap (4) comprises opening (6) wherein the band (7) may be introduced in order to form together with both straps and the watch case a closed loop intended to surround the wrist of the watch wearer. A press button (9, 11) enables the user to fix the free end of the band (7) in a position where the band is turned in so as to close the bracelet. The bracelet and the case are conveniently made in a single piece of injected synthetic material.
