Abstract (en)

[origin: WO8800892A1] In a sliding door (4) for motor vehicles, in particular passenger cars, said door being retractable into the body of the vehicle (1) during opening, the thickness (3) of the door in its retracted position, wherein it receives the lowered window (5), adopts an essentially vertical position. A coupling (19) is provided for the simultaneous movement of the body (3) of the door and of the window (5).
