Abstract (en)
A detergent compatible granular fabric softening composition, comprising a water soluble quaternary ammonium compound, a clay having an ion exchange capacity of at least 50 meq./100g and one or more amides, imides and urea derivatives according to four specifically defined formulae. A preferred group of amides to be applied are those according to the formula <CHEM> wherein R1 and R2 are the same or different and represent C1-C22 alkyl groups and wherein R2 additionally may represent hydrogen and wherein R3 represents hydrogen, C1-C22 alkyl, -(C2H4O)xH or - (C3H6O)xH wherein x has a value of 1 to 25, with the proviso that the sum of the carbon atoms of two radicals of R1, R2 and R3 is at least 16. More preferred are N-stearylstearamide or N-oleylpalmitamide. Additionally the invention relates to detergent-compositions comprising these softening compositions in an amount from 0.5 to 50% by weight and preferably 2-20% by weight.
