Abstract (en)

[origin: EP0258544A2] The electrical wires (L) leading to a processing device, in particular a wire preparation device, are held ready in barrels (F) and/or in the form of coils. Above the barrels (F) and/or coils there is arranged, preferably on a trestle (G), at least one wire channel (Lk3) leading to the processing device, the wires (L), which can be pulled out of the barrels (F) and/or out of the coils upwards in an axial direction, being introduced into the wire channel (Lk3) in each case via an associated deflection device, preferably via a curved guide tube (Fr). <IMAGE>
