Abstract (en)

[origin: EP0258601A2] The single-piece blank consists of a bottom, two longitudinal walls and two end walls, possibly also a lid, in particular for bulk products, preferably for washing powder and the like. The blank has a bottom area (1), to which two longitudinal wall areas (2) and two end wall areas and adhesive tabs are directly or indirectly attached. The bottom area (1) is extended by continuations at the end edges, the ends of which are cornered or rounded. The end wall areas are formed by four partial end wall areas (3) which are attached laterally to the longitudinal wall areas (2) and which overlap one another to form the adhesive connection. Positioned in the end wall areas (3) is at least one folding line (4) in each case which extends perpendicular to the bottom area (1) when the blank has been set up. Further adhesive tabs (8) are attached approximately centrally to the end edges (7) of the bottom area (1) or to the lower edges of the partial end wall areas (3), the arrangement being such that the partial end wall edges (3) are placed with their folding lines (4) on the contours of the ends of the continuations. <IMAGE>
