Abstract (en)

[origin: US4840264A] The invention relates to a deposit system installation for transport trolleys. This deposit system comprises a locking line constituted by a substantially horizontal bar and deposit system apparatuses which are connected to the trolleys, whereby there is cooperation of longitudinal sliding within the line. Each deposit system apparatus comprises a coin system arranged to permit the separation of the apparatus from the locking line by the introduction of a deposition such as a coin into the apparatus. This deposit may then be liberated by the passage of the apparatus over a decoding station which is part of the locking line.
