Abstract (en)

[origin: EP0258774A2] The foot securing device comprises a pressure distributor element (4) which affects the tibial region and the upper region of the foot. The distributor element (4) is slideably associated with the front quarter (2) of the boot (1) and longitudinally movable with respect thereto. A grip tab (9) is provided for the user, as well as a pawl lever (14) adapted to allow the rapid engagement and disengagement between the distributor element with the front quarter.
