Abstract (en)

[origin: EP0258919A1] The device makes access possible to an exit closed by a trap door (13) by opening a shutter (5) which blocks the access to the said exit. The main features of the device are (a) a locking mechanism (11) which keeps the said trap door (13) closed in its normal position; (b) means for moving the said trap door (13) under the effect of gravity when the said locking mechanism (11) is unlocked; (c) means for unlocking the locking mechanism (11) when the said shutter (5) is opened. <IMAGE>
